

In partnership with <u>Nazarenes for Creation Care</u>, listed here are some suggestions to help mobilize your congregation toward blessing your community!

Community Clean Up

Often, blessing your community can look like doing the "dirty" work that no-one else wants to do. Partner with your local municipality and community to mobilize a trash clean up in your area. (If in a costal area, consider doing a beach clean up.)

Reusables Drive & Giveaway

Plastic and single-use items create many problems for our communities and God's creation at large. Mobilize a drive to collect reusable cups, mugs, to-go containers, silverware, and shopping bags. Create "Reusable Kits" and give them away! These are great to keep in your car.

Food Composting

Food waste is one the biggest problems facing the planet today. Not only is throwing away food wasteful but it also creates harmful methane gases. Thankfully, composting is God's "ageold" natural solution for this! Consider building composts and offering a "How To" compost class for your community. Have a little bit of unused land at your church facility? Build an accessible compost for the surrounding neighborhood to use!

Recycling Team

Depending on where you live recycling options can vary greatly. Consider what items are difficult to recycle in your area and offer that as a ministry to your community! If it's glass, batteries, or bulbs for instance - create a drop-off location at your church facility. Schedule volunteers for monthly trips to a recycling facility. (If it's metal, consider "scrapping" it and using the funds for further ministry opportunities.)

Repair Cafe

Everyone has broken items somewhere in their home without an easy way to fix them. Create a weekly or monthly gathering/work space, brew some coffee, recruit some handy people, and begin offering repairs for your community! This can also be a great chance to offer skills training for youth in the community.

Planting and Gardening

The Spring and Fall are great times to engage in blessing your community through planting! Consider engaging neighbors in a community garden initiative, planting trees, implementing a native polinator garden at your church facicilty, or work to remove invasive plants.
